

Senate Bill 6442 will increase taxpayer costs, expand bureaucracy, eliminate competition and reduce benefits

A state takeover of K-12 educators' health benefit plans would provide **no cost savings** and **will actually cost taxpayers millions of dollars**. **SB 6442 and its companion bill, House Bill 2724, also will cost school employees more, reduce benefits and limit choices. It also eliminates local decision-making about educator health benefits. That's why educators oppose Senate Bill 6442 and House Bill 2724. They would:**

Impose higher costs:

- **Adds more than \$21.5 million in NEW taxpayer costs:** \$12 million for start up costs in 2011-13, plus \$9.5 million for additional start up costs in fiscal year 2014. The ongoing cost is then estimated to be \$7.1 million per year.
- Requires an additional **\$25 million per year paid by employees through higher premiums and "point-of-service cost sharing" (higher fees).**
- **Shifts all future cost risks to school districts** for costs above the state allocation.
- **Abandons a system that today costs less and provides more:** Currently, the state pays \$768 a month per full-time equivalent K-12 employee vs. \$850 per full-time state employee, yet K-12 employees get coverage that is as good or better than what state employees receive.

Reduce benefits:

- Requires lower overall benefits to avoid immediate cost increases.
- Wipes out health care coverage entirely for thousands of part-time employees who work less than half time.

Eliminate competition and expand state government:

- Replaces competition among plans school districts select from with a state monopoly that selects one carrier for all K-12 employees.
- Adds another costly function to the state bureaucracy at a time when vital funding for K-12 education and other services is being cut.
- Health care funding should pay for benefits, not growth in state bureaucracy.
- What is the evidence that state government can take over a private program, and perform as well or better at a lower cost?

Reward poor customer service:

- The state Health Care Authority had a recent 9-month backlog in paying state employee health insurance claims.
- Courts ruled against HCA for illegally barring some Medicaid patients from emergency room care.
- Recent *Seattle Times* exposé highlighted how the agency's cost-cutting practices were harming patients.
- Adding over 100,000 enrollees to a K-12 program administered by the HCA would likely mean customer service problems for K-12 employees.
- K-12 employees have had the option to enroll in the state employee health care plan since 1995, and less than one percent of the K-12 employees have made that choice.

SB 6442/HB 2724 is a plan based on higher costs, bigger government, less competition, and poor customer service.

There IS an alternative: [House Bill 2666](#) will help reduce health insurance costs for school employees with families by modifying local school district insurance pools. HB 2666 costs the state nothing, and it maintains local decision making.
